02 — Accessibility Guidelines

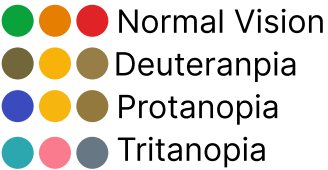

Contrast

Ensure sufficient contrast between text and background.
(WCAG 2.1 AA)

- ✓ Good Contrast
- ✗ Poor Contrast

Colour Blindness

Use colour combinations that are distinguishable for all users, including those with colour vision deficiencies.

03 — Before & After — SnapBook UI Audit

Improving colour usage and accessibility in the mobile interface.

Before (Issues)

- ✗ Low contrast text
- ✗ Inconsistent colours
- ✗ Colour used without icons
- ✗ Unclear button states
- ✗ Important information hard to read

After (Improved)

- ✓ Better contrast and readability
- ✓ Consistent colour system
- ✓ Colour combined with icons/text
- ✓ Clear and accessible button states
- ✓ Important information stands out

Colour + Icons/Text

Do not use colour alone to communicate information.
Always combine colour with icons, labels or text.

- ✓ Success

04 — Accessibility Checklist

Use this checklist to ensure your design is inclusive.

- ✓ Text has sufficient contrast against the background.
- ✓ Important information is not communicated by colour alone.
- ✓ Error states include icons and text (not only red colour).
- ✓ Success states include icons and text (not only green colour).
- ✓ Colours are distinguishable for users with colour vision deficiencies.
- ✓ Buttons and interactive elements are clearly distinguishable.
- ✓ Text is readable on mobile screens (different lighting conditions).
- ✓ Colour usage is consistent across all screens.
